

# Module-6

## Assignment-2

### Code:

#### ManagerThread class:

```
package Module_6;

public class ManagerThread extends Thread {
    public void run()
    {
        System.out.println("The order of 'n' BMW cars is ready.");
    }
}
```

#### ManufacturerThread class:

```
package Module_6;

public class ManufacturerThread extends Thread {
    public void run()
    {
        System.out.println("The manufacture of 'n' BMW cars is done.");
    }
}
```

#### DealerThread class:

```
package Module_6;

public class DealerThread {
    public static void main(String args[])
    {
        Thread T1 = new Thread(new ManagerThread());
        Thread T2 = new Thread(new ManufacturerThread());

        T1.start();
        T2.start();
    }
}
```

### Output:

```
The manufacture of 'n' BMW cars is done.
The order of 'n' BMW cars is ready.
```
